Summary

Software engineer building useful tools for product and operations teams. Works across Python, TypeScript, and SQL, with a focus on reliable services, clear interfaces, and thoughtful documentation.

Technical Skills

Languages: Python, TypeScript, SQL
Frameworks: React, FastAPI, Node.js
Tools: Git, Docker, Linux
Practice: Testing, API design, documentation

Projects

Open Notes | *Python, SQLite, React* **2024**

– Created a local research notebook with full-text search, Markdown export, and a keyboard-friendly interface.

Community Transit Map | *TypeScript, Public Data* **2023**

– Built an accessible route explorer with saved stops and clear service information for local commuters.

Experience

Northstar Studio Remote
Software Engineer 2023 - Present

– Built a reporting workspace with Python and React that brought customer and operations data into one view.
– Reduced report preparation time by 35% through scheduled data checks and reusable export workflows.
– Partnered with designers and support teams to turn customer feedback into focused product improvements.

Fieldwork Labs Portland, OR
Junior Developer 2021 - 2023

– Developed REST endpoints and internal dashboards for a small product team using TypeScript and PostgreSQL.
– Added integration tests and release documentation to make changes easier to review and maintain.

Education

Coastal State University Portland, OR
B.S. Computer Science 2017 - 2021

Certifications

AWS Certified Cloud Practitioner - 2024
