Summary

Software engineer building useful tools for product and operations teams. Works across Python, TypeScript, and SQL, with a focus on reliable services, clear interfaces, and thoughtful documentation.

Education

Coastal State University — Portland, OR
B.S. Computer Science — 2017 - 2021

Experience

Northstar Studio — Remote
Software Engineer — 2023 - Present

- Built a reporting workspace with Python and React that brought customer and operations data into one view.
- Reduced report preparation time by 35% through scheduled data checks and reusable export workflows.
- Partnered with designers and support teams to turn customer feedback into focused product improvements.

Fieldwork Labs — Portland, OR
Junior Developer — 2021 - 2023

- Developed REST endpoints and internal dashboards for a small product team using TypeScript and PostgreSQL.
- Added integration tests and release documentation to make changes easier to review and maintain.

Projects

Open Notes | Python, SQLite, React — 2024

- Created a local research notebook with full-text search, Markdown export, and a keyboard-friendly interface.

Community Transit Map | TypeScript, Public Data — 2023

- Built an accessible route explorer with saved stops and clear service information for local commuters.

Technical Skills

Languages: Python, TypeScript, SQL
Frameworks: React, FastAPI, Node.js
Tools: Git, Docker, Linux
Practice: Testing, API design, documentation

Certifications

AWS Certified Cloud Practitioner - 2024
